

***Mattresses and Pillows
made of 100% Organic Natural Latex***

Natural

*Sleep on an organic, environmentally friendly
100% natural latex mattress with natural latex pillows*

Sänger GmbH

The company Sänger GmbH was founded in 1983 and has its headquarters in Schrozberg/Germany. Production sites are located in Asia. Since we are involved in the rubber plantation industry and have our own production facilities, we can offer our goods from a single source. From the cultivation of raw materials to production and sales, we are your reliable partner. With our portfolio of pillows and mattresses we offer sustainable sleep solutions made from 100% organic natural latex. With the production of organic products we help for conservation of our environment and help our customers to experience a natural, relaxing sleep.

100% natural latex foam mattresses and pillows offer many benefits, specially a high quality, non-poisonous sleep experience.

There are 5 basic requirements for a mattress to provide a regenerative sleep experience to the body. The basic requirement for your health:

- The bed should be free from chemicals, water, electricity and metal
- 100% adaptation of the mattress and slatted frame to the body
- Dry heat instead of moisture build-up thereby:
- No formation of microbes in mattresses, blankets or pillows
- Detoxification: the immune system has a break from fighting - it detoxifies.

The advantages of mattresses and pillows made from 100% natural latex foam

- The unique balance between soft comfort and adequate support for your spine.
- 100% natural latex is resistant to dust mites, mould and bacteria without the use of any chemicals.
- The air circulation is guaranteed by the open-cell and natural structure of latex and by a specially created hole pattern. Optimum breathability leads to a comfortable sleeping temperature and climate.
- The excellent body pressure distribution properties of latex mattresses are often recommended by doctors. Experts such as chiro-practitioners, physiotherapists and osteopaths are just as convinced that lying completely relaxed is the best way to prevent back pain and muscle tension.
- A 100% natural latex mattress does not transmit movements so that even on a double mattress a peaceful and undisturbed sleep is ensured.
- 100% natural latex mattresses are very durable and guarantee an undeforming surface during their lifetime. They automatically return to their original shape due to their elastic properties. The mattresses do not require to be turned over regularly. Choosing a high-quality mattress made of 100% natural latex foam is a basic investment in your health that you will not regret.

What is organic latex?

100% natural latex with an organic quality seal of the USDA Standards comes from certified agriculture. The best organic natural latex mattresses are certified according to the Global Organic Latex Standard (GOLS). GOLS is the standard for the highest requirements in our industry. This ensures that the latex in our mattresses comes from trees that are maintained according to these standards and meet the USDA organic requirements. The entire manufacturing process is sustainable and environmentally friendly.

The GOLS regulations are:

- The rubber trees grow without the use of chemical fertilizers.
- Waste and pollution management in the manufacturing process.
- Wastewater treatment, no toxic discharge.
- Energy and water savings.

Why Organic?

Our organically produced mattresses and pillows are the right choice for those who care about the environment.

When buying organic latex mattresses, you are choosing a sustainable, environmentally friendly product.

We all have a duty to care for the world we live in and buying organic products help fulfil our responsibilities.

Organic products encourage us to think about the sustainable use of valuable resources.

The organic seal of approval guarantees that your mattresses and pillows do not contain any toxic chemicals or pesticide residues in or on the mattress. In addition, organic means that no toxic chemicals are used in the production process at the factory.

We can be sure that the mattresses are not contaminated in any way. This makes the organic mattress the first choice for parents who want to enable themselves and their children a healthy and relaxed sleep on a clean mattress.

Natural

The Rubber Tree (Hevea Brasiliensis)

Growing rubber trees in a nursery

The life cycle of the rubber tree is approx. 32 years. Latex extraction begins when a tree is between 5 - 7 years. This is done by a method known as rubber tapping. This is done by cutting the bark without damaging the tree. The trees' growth is not affected. The latex milk is collected. The lifespan of a rubber tree depends on the precision and accurate work of the tapper.

Here are some key figures:

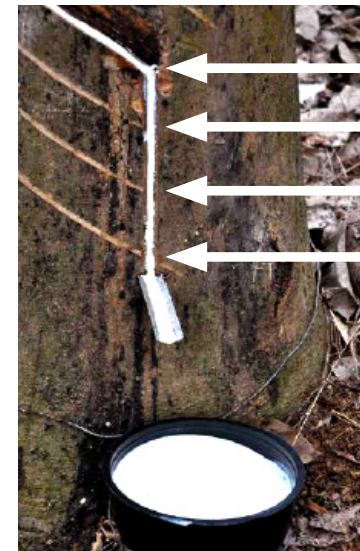

1. A rubber tree yields about 3 kg of latex per year.
2. The tree is tapped 200 days per year.
3. For a 5.5 kg mattress topper, the annual amount of latex from 2 rubber trees is required.
4. A latex pillow 40 x 70 x 11 cm weighs around 1.7 kg.

Bud Grafting

A rubber tree is ready to be bud grafted once it reaches around 1 m in height. Grafting refers to a process of placing the branch taken from a grown tree into a young tree. The young tree is taken from a nursery and planted into the rubber plantation when it is around 3 to 3.5 cm thick.

Each section stands for one year of tapping:

1st year

2nd year

3rd year

4th year

Natural Latex Foam – Health Benefits

- Mould and mildew resistant
- Antibacterial
- Antimicrobial
- Inhospitable to dust mites
- Breathable materials (cooling in summer, warming in winter)

Sleeping Comforts

1. Provides an even sleeping surface
2. Breathable sleep surface
3. Open cell structure – does not retain moisture
4. Removes the body perspiration quickly from the mattress
5. The ideal comfort surface adapts to your body and supports your body
6. The spinal column is supported for a relaxing sleep experience

In addition, our mattresses and pillows are resistant to dust mites. They are naturally resistant to mold and mildew, which are the main causes of asthma and pulmonary function allergies.

Natural

Latex Allergien in Latex Mattress / Pillows

Natural latex is the main component of many consumer goods such as pacifiers, condoms and medical gloves.

- Latex allergies occur when the immune system, which normally protects the body from bacteria, viruses and toxins, reacts to latex.

- A latex mattress does not affect an allergy because ours mattresses are wrapped in wool and then enclosed with a firm cotton ticking.

- Our products have been tested by independent institutions and are proven to be beneficial for people who suffer from allergies to mold, mildew or bacteria.

- In addition, our mattresses and pillows are resistant to and resistant to dust mites, mold and mildew, which has a positive effect on asthma and pulmonary function allergies.

The Difference Between Natural And Synthetic Latex

- Most latex manufacturers in the Far East and Africa (Sri Lanka, Malaysia, Ivory Coast, etc.) use 100% natural latex from rubber trees. Synthetic latex is a petrochemical substance, a mixture of styrene and butadiene and has a similar molecular structure. Natural latex is highly elastic, which makes it both resilient and supportive.

- Synthetic latex has the same supportive effect, but no elasticity as natural latex.

- Synthetic latex has a shorter lifespan.

Natural

Internationale Standards

eco-Institut GmbH, Germany

„Tested for hazardous emissions of VOC (volatile organic compounds) and Chlorophenol (below the detectable limit of 0,1mg/kg)“

The certification by eco-Institut GmbH, Germany, guarantees there are no residues of harmful chemicals, fillers or synthetic rubber in our latex foam. Our mattresses and pillows made of eco-certified latex foam are non-toxic and a healthy to use in bedding.

TÜV Rheinland LGA Produkte GmbH, Germany

„Tested for Stability and Durability“
This test evaluates the durability and resilience of a mattress. It is important to check the physical properties and hardness of the mattress core in order to ensure the quality and assess the lifespan. The LGA certification is a mark of long lasting durability with an intended purpose of our products.

OEKO TEX®

Tested for harmful substances, prohibited ingredients and legally regulated substances in textile raw materials. The OEKO-TEX® Standard 100 is an independent testing and certification system for textile raw materials, intermediate and end products in all stages of production.

Forest Stewardship Council, USA

The Forest Stewardship Council, or abbreviated: FSC, is an international non-profit organization. The Council created the first system for certification of sustainable forestry, operates it permanently and develops it further. Our latex raw material is obtained from FSC-certified plantations. This is our support for responsible management of forests.

Control Union, Netherlands, Global Organic Latex Standards (GOLS)

The certification confirms that our rubber trees grow on USDA certified organic plantations. In addition, the environmentally friendly production of latex foam is certified under environmentally friendly conditions while protecting local communities, livelihood and the environment from toxic discharge.

Control Union, Netherlands, Global Organic Latex Standards (GOLS)

The certification confirms that our rubber trees grow on USDA certified organic plantations. In addition, the environmentally friendly production of latex foam is certified under environmentally friendly conditions while protecting local communities, livelihood and the environment from toxic discharge.

Rubber Consultants, UK

“Tested for butadiene, with confirmation that only 100% Natural latex is used.”

100% Natural, „Zero blended“

Our products are manufactured exclusively with 100% natural latex. No fillers or synthetic latex is added.

The European Chemical Regulation REACH

The European chemical regulation REACH provides a high level of protection safe for people and the environment in terms of chemical pollution. All our raw materials for latex mattresses and latex pillows comply with these REACH regulations on.

USDA - Associated Laboratories, California, USA

“Compliance to California Proposition 65 Law for non-detection of carcinogenic substances “Prop 65 includes a wide-ranging list of chemicals tested on products of concern to the state of California, many of which are found in commonly used products, which contain toxic substances that cause cancer and birth defects, to reduce or eliminate exposure to those chemicals.

Ergo Support GmbH carries out neutral and independent testing, evaluation and certification of mattresses, among other things. The focus is on user-friendly, ergonomic designs, usability and durability of the tested product. The tests are based on scientific methods and technical procedures.
